Product Description

Ventrac MK960 Mowers - Wide Area Attachment - MK960

Increased productivity just got easier with this 95" mowing deck. The cut range of 1" to 5" allows for an adaptable height on finish grass. The tool-free height adjusts quickly and easily with two levers, offering an advantage over other mower decks in its class. Designed with a rear discharge, the WAM makes an excellent choice for mowing in public areas where mower debris is a concern. The rear discharge also makes for easy trimming from either side of the deck.

The deck can be installed in just minutes with the Ventrac Mount System and features a flip-up design so the underside of the deck can be easily accessed for maintenance and cleaning. An optional hydraulic flip-up kit is available to eliminate the labor of heavy lifting.
